

Threaded Baseplate Bollards

Threaded Base Bollards provide a firm, clean look and solid protection without core drilling into a hard surface. These two piece bollards consist of a threaded metal base that easily bolts onto the floor and an upright bollard that firmly threads onto the base. Better yet, there is no trip hazard with this surface mounted bollard.

Many food and health environments use 1-800-BOLLARDS Threaded Base Bollards.

Retail stores often protect expensive refrigerators, freezers, counters, and shelves from shopping carts and pallet jacks.

Threaded Base Bollards have a smooth dome cap and are available in three types of metals including powder coated Carbon Steel. These bollards look good!

FEATURES

Steel Options

- STAINLESS – #4 Polished Finish, Type 304
- CARBON – Powder-coated
- GALVANIZED – Powder-coated
